

RMIS AI

Streamlining your incidents, insurance
and claims with Archer

Operational events can provide unique insights into your controls.

When a risk event happens, often it is a direct reflection of how well controls are operating – or not operating. Companies find it difficult to correlate the vast amount of data to understand the real cause of the issue. Tracking incidents to claims, assessing proper insurance coverage, and finding the real control gaps across thousands of assets can be daunting. Uncorrelated data coupled with poor record-keeping only make matters worse. Manual processes can also put your organization at risk. A modern Risk Management Information System (RMIS) improves how well you are covering risk exposures through insurance and gives valuable insight into the effectiveness of controls across your operations.

With **Archer RMIS AI**, you can streamline your insurance, claims and incident processes and organize your insurance program, improving your overall risk management strategy.

Proactive decision-making: By tracking incidents and identifying systemic problems, you can make informed decisions for controls that mitigate issues before they impact the business.

Reduced costs: By analyzing your operational incidents, you can optimize your policy coverages and improve controls to reduce your total cost of risk.

Enhanced resilience: A robust loss management framework brings insights to events that could cause a larger disruption, helping you better prepare for and bounce back quickly from unexpected events.

Improved performance: By analyzing losses, incidents and claims, you can make the right decisions for your strategic goals.

Optimizing your incidents, claims and insurance process is a key part of protecting your business against losses that affect the bottom line.

How does Archer RMIS AI help you?

Our integrated AI solution is focused on delivering your core requirements and insights without the complexity and over-design of traditional RMIS platforms.

Create an intelligent, sustainable and agile program for insurance, claims and incident management.

Improve visibility by consolidating data and enabling analytics to optimize your risk mitigation strategies.

Drive efficiency for both your risk managers and analysts and your business operations.

Purpose Built for Risk Management

ORCHESTRATE YOUR INSURANCE AND CLAIMS PROGRAM

Archer RMIS AI streamlines your incident, claims and insurance processes. You can centralize data, automate processes, collect timely, actionable information and drive risk-based business decisions.

INTEGRATE INTO YOUR INFRASTRUCTURE

Archer RMIS AI enables you to consolidate policy and claims data from carriers and brokers into one system. You can analyze and draw insights from across the organization.

ENGAGE YOUR OPERATIONS

Archer RMIS AI delivers a streamlined experience for first line business users. They can report incidents, file claims and provide input into your program.

INFORM YOUR ORGANIZATION

With premiums, trend analysis on incidents and claims, and performance metrics at your fingertips, these insights will help you optimize your risk mitigation strategies.

Experience matters when it comes to managing risk. Over the past 20 years, Archer has built a reputation of leading the industry - delivering solutions to emerging challenges while helping our clients build a strong, sustainable integrated approach to risk management.

Archer RMIS AI is an intuitive and cost-effective solution for insurance and exposure data management, claims management, and incident reporting.

With centralized data, automated workflows, easy to use reporting and advanced analytics, you can create a program that is high value, and vital to your risk management strategy.
